### DETAILED ACTION

#### *Claim Rejections - 35 USC § 112*

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claim 38 is rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The specification lacks written description in the description on the validating step. It is unclear how are data records are being validated using a diagnostic code and/or a treatment code in order to process the medical claims. It is also unclear and lacks of description on how a predefined relationship between a diagnosis code and a treatment code in the validated data records and a predefined episode treatment categories are being read.

#### *Claim Rejections - 35 USC § 102*

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claim 38 is rejected under 35 U.S.C. 102(b) as being unpatentable over Pritchard (U.S. 4,491,725).

Art Unit: 3628

Pritchard discloses a computer implemented process for processing medical claims including the steps of:

- ◆ reading a medical claim data, input as at least one of plurality of data records, into a computer memory (col.4, lines 30-48);
- ◆ validating each of the at least one of plurality of data records, into a computer memory(col.4, lines 30-48);
- ◆ reading at least one predefined relationship between the at least one of a diagnosis code and a treatment code in the validated at least one of a plurality of data records and predefined episode treatment categories (abstract; “A local service provider enters into a local terminal the medical and MEDICARD information services provided or to be provided to the patient by using a patient service code and transmits this information to a central brokerage computer. The central brokerage computer converts the patient service code input by the service provider or MEDICARD into a particular service code for the patient's insurance carrier.”); and
- ◆ grouping the validated at least one of a plurality of data records to an episode treatment category based upon the predefined relationship, each episode treatment category having a dynamic time window defining a time period during which validated at least one of plurality of data records may be grouped to an episode treatment category (col.5, line 18-col.9, line 49; it is inherent each and every episode treatment category have a dynamic time window).
